LAB EXPERIMENT

COURSE CODE: ITA0318

COURSE NAME: MOBILE COMPUTING

REG NO: 192324235 **NAME:** JOTHIKA M

EXP -13

13.Design an infographic in Figma comparing mobile communication and mobile computing

Aim: -

Using Figma design an infographic comparing mobile communication and mobile computing

Procedure: -

1. openFigma

2. Create a new file

3. Select the Frames

4. Fill in the content that is required for presentation

5. Design Visual Elements

6. Make it Interactive

7. Add Annotations and Explanations

8. Incorporate Multimedia

9. Storyboard Animation

11. Review and edit the Prototype

12. Save and Share

Design:

Mobile Communication vs Mobile Computing

Connected is not the same as computing. One moves information between devices; the other makes information useful on the move.

EXCHANGE INFORMATION

Mobile Communication

PURPOSE

Exchange voice, messages and data between devices.

MAIN COMPONENTS

Mobile devices, radio access networks, base stations, core networks and communication protocols.

EXAMPLES

Phone calls, SMS, cellular data and wireless communication.

USE INFORMATION

Mobile Computing

PURPOSE

Process, store and use information on portable devices while mobile.

MAIN COMPONENTS

Mobile hardware, operating systems, applications, processors, storage, sensors and network connectivity.

EXAMPLES

Mobile banking, navigation, cloud applications and mobile data analysis.

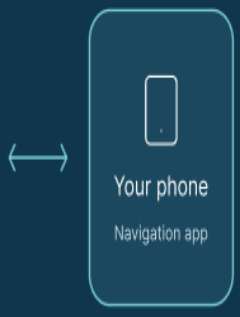

BETTER TOGETHER

A smartphone combines both.

Compute locally

The app uses the processor, storage and GPS to calculate a route.

Offline: saved maps still work.

Exchange over a network

Radio and network protocols send requests to servers and return live traffic.

Connectivity enables sync and cloud access.

AT A GLANCE

Seven dimensions, one clear distinction

Dimension	Mobile Communication	Mobile Computing
Purpose	Exchange voice, messages and data.	Process, store and use information.
Infrastructure	Radio access, base stations and core networks.	Local device resources; optional cloud services.
Hardware	Handsets, antennas, radios and network equipment.	Processors, memory, storage and sensors.
Software	Communication protocols and network control.	Operating systems and applications.
Mobility	Maintains exchange across coverage areas.	Supports tasks while the user is on the move.
Connectivity	A link is required for device-to-device exchange.	Can work offline; connects for sync and cloud access.
Applications	Calls, SMS, cellular data and wireless links.	Banking, navigation, cloud apps and data analysis.

Computing does not always need a connection. Communication provides the link when information needs to travel.

FIELD NOTES / MOBILE SYSTEMS

Concept comparison / 01

Result: -

An infographic design in Figma comparing mobile communication and mobile computing is created successfully.
