LAB EXPERIMENT

COURSE CODE: ITA0318

COURSE NAME: MOBILE COMPUTING

REG NO: 192324235 **NAME:** JOTHIKA M

EXP -14

14. Develop a flowchart in Figma explaining the operation of General Packet Radio Service (GPRS).

Aim: -

Draw a flowchart in Figma explaining the operation of General Packet Radio Service (GPRS).

Procedure: -

1. openFigma

2. Create a new file

3. Click on the resources icon and click on the plugins

4. Search for the Flow Chart

5. Drag and drop the shapes on the screen

6. Now, enter the content on the shapes and connect them through Arrows.

7. Grouping and alignment

8. Review and edit

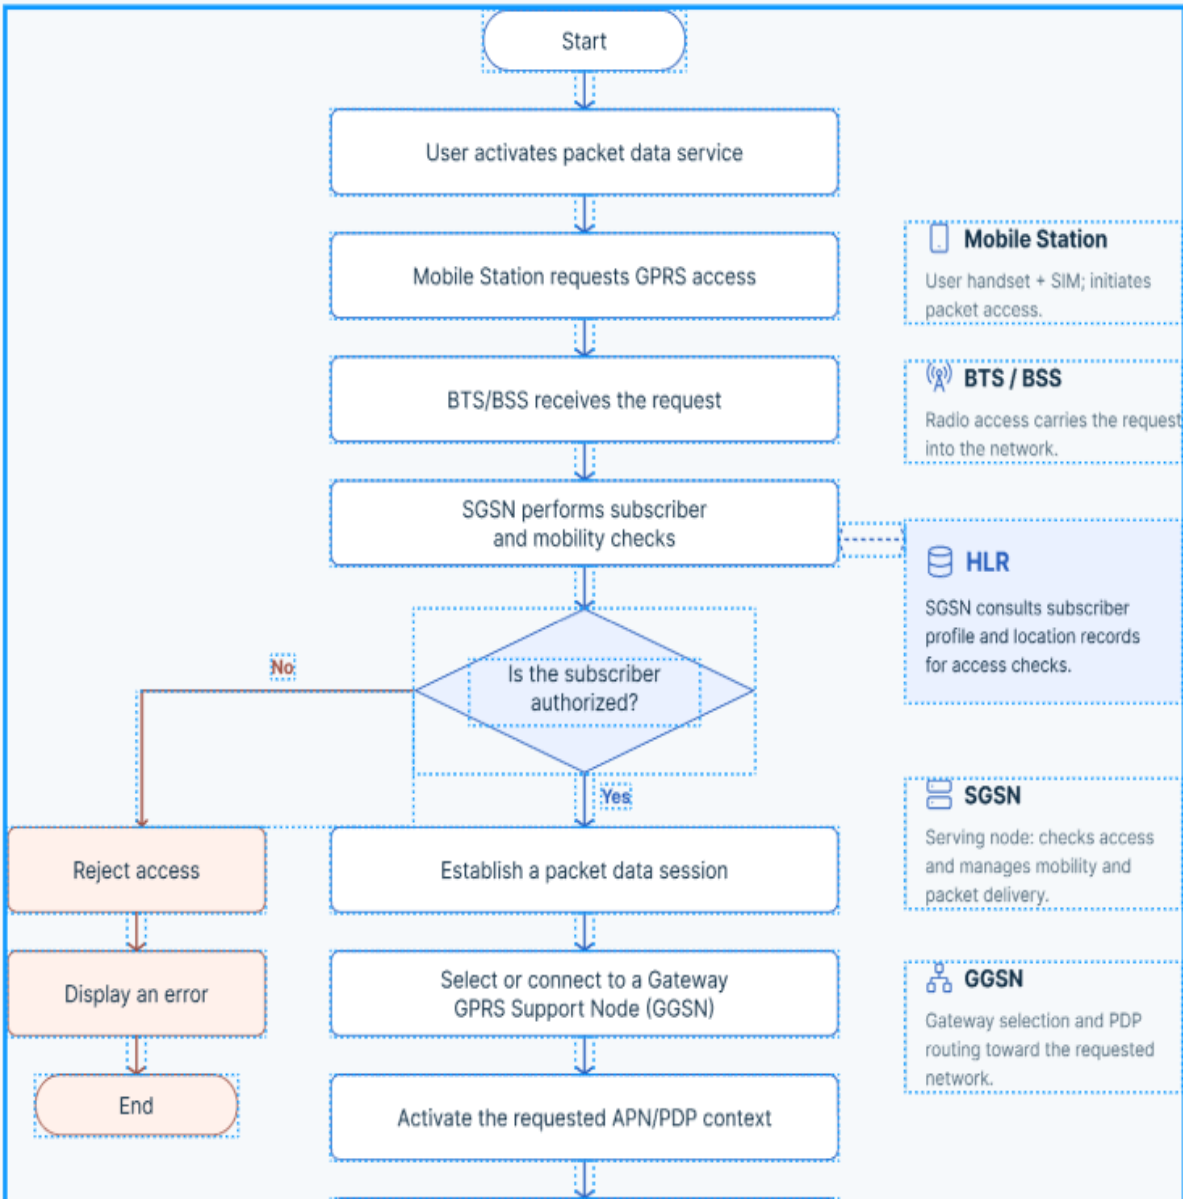

9. Save and share

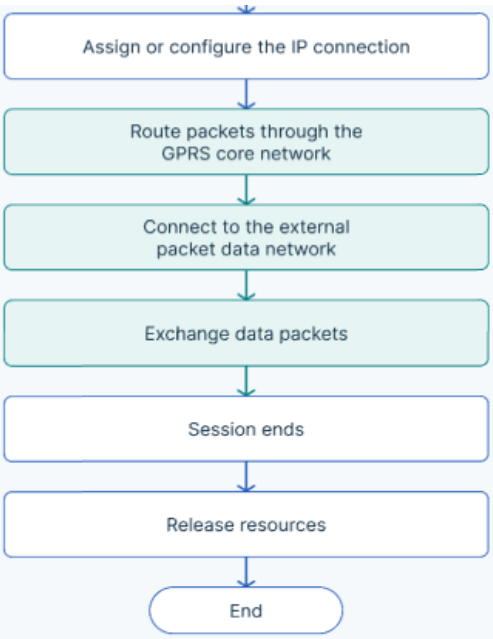

Design:

Operation of General Packet Radio Service (GPRS)

From access request to resource release: follow the authorized path downward, or take the rejection branch when subscriber checks fail.

Signaling / session control — Packet-data phase / path — Read top → bottom

External network

Internet or private IP network reached through the GGSN.

PACKET-DATA PHASE

User packets travel in both directions. The downward arrows show the operation sequence, not one-way traffic.

Read the session context

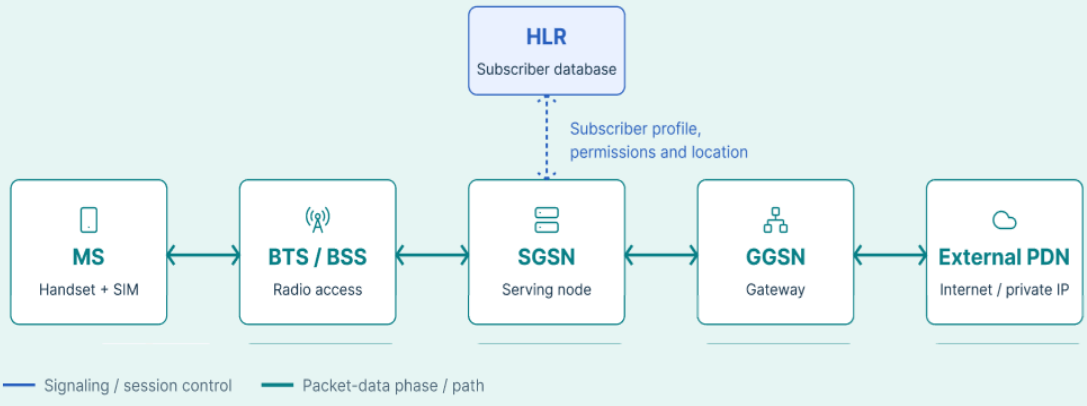

APN identifies the target packet network. The PDP context holds session parameters, including addressing and routing information. HLR exchange is supporting signaling, not an extra step in the primary sequence.

GPRS: the role of each component

Six building blocks connect a mobile user to an IP network. Separate the packet path from the subscriber information that makes access possible.

The packet path, in context

Simplified logical architecture

Result: -
Hence the flowchart in Figma explaining the operation of General Packet Radio Service (GPRS) has been drawn successfully.
